🏆 Pro Tips & Playbooks

👏 Welcome to the Most Powerful Tool in Your Arsenal

This is not just a marketing tool. This is a complete revenue engine. You can now do things that companies spend millions on — automated sequences, live financial personalization, behavioral targeting, and real-time analytics — all from one dashboard.

> 💡 **The Big Idea:** Think of this system like having a team of ten people working for you 24/7. One person watches who opens your emails. Another one automatically sends follow-ups. A third one knows when a client's invoice is overdue and sends a gentle reminder — all without you lifting a finger. That's what this system does for you.

CHAPTER 1

The Overview Dashboard

The **Overview tab** is your marketing command centre. The moment you log in, this is the first thing you see — a live, real-time snapshot of everything happening with your audience right now.

What You're Looking At

Total Contacts

The total number of people in your marketing system — leads, clients, and subscribers combined.

Emails Sent

How many marketing emails have gone out in total across all your campaigns.

Open Rate

The percentage of people who actually opened your emails. Industry average is 20%. Aim higher!

Hot Leads

People with an Engagement Score above 70. These are your most interested prospects — call them first!

The Engagement Score System

Every contact in your system has a **live Engagement Score**. Think of it like a "temperature gauge" for how interested someone is. The higher the score, the hotter the lead.

Action	Points Earned	What it means
📧 Opens your email	+5 points	They're curious — they saw your subject line and clicked
🖱️ Clicks a link inside	+10 points	They're interested enough to take an action
🌐 Browses your website	+2 points each visit	They're exploring properties even without being emailed

> **Scoring Tiers:** Anyone below 30 is "Cold" (needs nurturing). 30–69 is "Warm" (they're interested, keep going). 70+ is "Hot" (call them today — they're ready to buy).

The Growth Chart

The line chart on the Overview tab shows you how your contact list is growing over time. A growing list means your marketing is working. A flat line means you need to generate more leads. This is your progress report.

The Audience Tier Donut Chart

The donut chart on the right breaks your entire audience into three buckets: Hot, Warm, and Cold. Your goal is to steadily move people from Cold → Warm → Hot through great email campaigns.

CHAPTER 2

Campaigns

A **Campaign** is a single marketing email that you design, write, and send to a group of people. Think of it like printing and delivering custom flyers — except you can track exactly who read them and who threw them away.

Campaign Statuses Explained

Draft

You're still working on it. Only you can see it. Nothing has been sent yet.

Scheduled

You've approved it and set a specific time for it to go out automatically.

Sending

Emails are being delivered to recipients right now.

Sent

All emails delivered. You can now view the full analytics report.

Step-by-Step: Creating Your First Campaign

1. **Click "New Campaign"**
   A small form will appear. Give your campaign a clear name like "April Property Launch — Lekki" and write the email subject line (e.g. "Yours could be the best address in Lagos 🏠").

2 **Open the Editor**

Click "Edit Draft" to open the full email designer. This is where you design the actual email your leads will receive. (See Chapter 3 for the full Editor guide.)

3 **Click "Send Campaign"**

Once your design is ready, click the green Send button. You'll see two options:

"Send Now"

(instant! Goes out within minutes) or

"Schedule for Later"

(pick a future date & time).

4 **Choose Your Audience**

You can send to "All Contacts", any custom segment you've created, or paste in a specific list of emails manually.

5 **View the Report**

After sending, click the 👁 "View Report" button on the campaign to see who opened it, who clicked, and who bounced.

Scheduling — Your Secret Weapon

The best time to send marketing emails in Nigeria is **Tuesday or Wednesday, between 9 AM and 11 AM**. People are alert at work and checking their inbox. Avoid Monday mornings (too busy) and Friday afternoons (everyone's winding down). Use the scheduler to hit this window perfectly — even if you're on a site visit at the time.

Duplicating a Campaign

If you have a campaign that performed really well, don't start from scratch. Use the **Duplicate button** (the copy icon). It makes an exact copy as a new

Draft, which you can then tweak and send to a different audience. This is great for A/B testing.

> ✅ **Quick Win:** After a campaign is sent, use the Report's "Recipients" tab to see which contacts engaged. These are the people you should follow up with by phone — they've already shown interest.

CHAPTER 3

The Email Editor (Your Design Studio)

This is where you build emails that stop people from scrolling. The editor works on a **drag-and-drop block system** — think of building with Lego bricks. Each block is a piece of your email: a heading here, an image there, a button at the bottom.

The Building Blocks — Left Sidebar

Text Block

A paragraph of text. Your main message. Supports formatting like bold, italic, and links.

Image Block

Upload a photo of a property, your team, or a banner. Images make emails 3x more engaging.

Button Block

A clickable button. Great for "Book a Viewing", "Claim Your Offer", or "Learn More". Every click is tracked!

Divider

A horizontal line to separate sections and make your email look clean and organized.

🏠

Property Card Block

Pulls LIVE property data from your database and creates a beautiful, fully-branded estate card automatically.

📋

Account Summary Block

Shows a client's personalized financial data — outstanding balance, what they've paid, due dates — all automatically filled in from your finance system.

Personalization Tags — Make Every Email Feel Personal

Instead of saying "Dear Customer", you can make every email feel like it was written specifically for that one person. Click the **"Tags"** button in the editor toolbar to see all available tags. Click any tag to copy it, then paste it into your email text.

Tag	What it inserts	Example Output
`{{first_name}}`	Contact's first name	"Dear Emeka,"
`{{last_name}}`	Contact's last name	"Dear Mr. Okafor,"
`{{outstanding}}`	How much they still owe	"₦2,500,000 outstanding"
`{{amount_paid}}`	How much they've paid so far	"₦7,500,000 paid"
`{{total_invoiced}}`	Total amount of their invoice	"₦10,000,000 total"
`{{property_name}}`	Name of the property they bought	"Eximp Gardens Phase 2"
`{{due_date}}`	Their next payment due date	"30th April 2026"

> 💡 **Power Move:** Combine tags for maximum impact. Write: *"Hi {{first_name}}, just a friendly reminder that your balance of {{outstanding}} for {{property_name}} is due on {{due_date}}. Please contact us if you need to discuss a payment plan."* — The system fills this in uniquely for every single client automatically!

The Template Library

You don't have to start from a blank page every time. Click **"Blocks"** in the left panel to see pre-built sections you can drag in. There are templates for:

- **Welcome emails** — for new leads
- **Property showcase** — with an automatic estate card
- **Payment reminder** — with the live Account Summary block
- **Newsletter headers & footers** — keep your brand consistent

The Unsubscribe Footer — It's Automatic

Every email you send automatically includes a professional **unsubscribe link** at the bottom. This is not optional — it's the law (GDPR and CAN-SPAM compliance). You don't need to add it yourself; the system handles it. When someone clicks it, they are taken to a branded landing page, their record is updated, and the system will never email them again.

Preview & Testing

Before you send to hundreds of people, use the **Preview** button to see exactly how the email will look. If something looks off, fix it in the editor. Always preview on desktop AND check how it looks on mobile by resizing your browser window.

CHAPTER 4

Contacts — Your People

The **Contacts tab** is your full CRM (Customer Relationship Management) database. Every lead and every client who has ever expressed interest in your properties lives here. This is your most valuable business asset — treat it carefully.

Contact Types

Lead

Someone who has shown interest but hasn't bought yet. They're in the sales funnel. Your job is to nurture them until they're ready to buy.

Client

Someone who has made a purchase. When a client is registered in the Finance system, they automatically sync here and get upgraded from Lead to Client.

What You Can See on Each Contact

- **Engagement Score** — Their current "temperature" (see Chapter 1).
- **Total Opens / Clicks** — How many of your emails they've opened and clicked across all campaigns.
- **Last Activity** — The last time they interacted with any of your emails.
- **Subscription Status** — Green dot means subscribed (can receive emails). Red dot means they've unsubscribed (you must not email them).
- **Lead Source** — Where they came from (e.g. "Lagos Expo 2024", "Website Form", "Referral").

Viewing a Contact's Full Profile

Click the ⋮ **menu** next to any contact and select "View Profile & History." You'll see a full interaction timeline — every campaign they received, every email they opened, every link they clicked — in chronological order. This is gold for your sales team before they make a call.

Adding Contacts

There are three ways to add people to your contact list:

1. **Manually — One by One**
   Click "Add Contact" and fill in their details. Good for people you met at an event, through referrals, or on calls.

2. **CSV Import — Bulk Upload**
   If you have a spreadsheet of leads, export it as a .CSV file and use the "Import CSV" button. The system will create records for all of them at once.

3. **Automatic Sync from Finance**
   When a new client is registered in the Finance Dashboard, they are automatically created or upgraded here *without any manual action*.

Syncing Clients from Finance

Use the **"Sync Clients"** button (top right of Contacts tab) to do a one-time pull of all existing clients from your Finance system into your Marketing contacts. After the initial sync, all new clients are synced automatically.

> 📌 **Important:** If a person exists as both a Lead and a Client (they were a lead and then bought), the system is smart enough to *merge* them — upgrading the existing record to Client status rather than creating a duplicate.

The Search & Filter

Use the search bar to quickly find any contact by name or email. You can also click any Segment card (Chapter 5) to filter the contacts list to show only people who match that segment's criteria. When filtering is active, a gold badge will appear at the top of the contacts table showing which filter is active.

🎯

CHAPTER 5

Segments — Laser-Focused Targeting

A **Segment** is a smart, filtered group of contacts. Instead of sending the same email to everyone and hoping it's relevant, you send targeted messages to specific groups who are most likely to respond. This is how the big players do it.

> 🧠 **Think of it this way:** Imagine you're a doctor. You wouldn't give every patient the same medicine. A Segment helps you give each group exactly what they need. Overdue clients need a payment reminder. New leads need an introduction. Hot prospects need an irresistible offer.

The Built-In Smart Segments (Ready to Use)

These are pre-built and always up-to-date automatically — no setup needed:

✨

Engaged Audience

Everyone who has opened at least one email. These people know who you are — great for follow-up campaigns.

🔥

Hot Leads

Everyone with an Engagement Score above 50. These are people who keep interacting with you. Prioritize these!

NEW

Recent Signups

Anyone who joined your list in the last 30 days. Perfect for a "Welcome to the Eximp & Cloves family" campaign.

Overdue Clients

Clients whose invoice due date has passed and still have a balance. Automatically calculated from your Finance system.

Outstanding Balance

Clients who have made partial payments but still owe money. Great for a gentle reminder campaign.

Fully Paid

Clients who have completed all payments. A great group to celebrate, ask for referrals, or upsell new phases.

Creating Your Own Custom Segments

Click **"Build Custom Segment"** to create your own group using rules. You can combine multiple rules for very precise targeting.

Available Rules:

- **Engagement Score** is greater than / less than [number]
- **Lead Type** is equal to "Lead" or "Client"
- **Lead Source** contains "Lagos Expo" (target people from a specific event)
- **Last Opened** is in last [X] days (e.g. active in last 7 days)
- **Has opened campaign...** — Did they open a specific campaign?
- **Has clicked link in...** — Did they click a link in a specific campaign?

How to Use a Segment

Click any segment card and it immediately filters your Contacts list to show only those people. You can then send them a campaign by clicking "Send

Campaign" and choosing that segment as your audience. The system counts these people in real-time, so you always know exactly how many people you're reaching.

> 🏆 **Best Practice Playbook:**
> **Week 1:** Send a "New Property Launch" email to ALL contacts.
> **Week 2:** Resend a different version to the segment "Opened but didn't click" from Week 1.
> **Week 3:** Call or WhatsApp everyone in the "Hot Leads" segment personally.
> This three-step flow consistently outperforms blasting everyone with the same message repeatedly.

CHAPTER 6

⚡ Sequences (Auto) — Your 24/7 Sales Machine

A **Sequence** is a series of emails that get sent to someone automatically over a period of days or weeks. You set it up once, and then it runs by itself — forever — for every new lead or client that enters it. This is the most powerful feature in the system.

> 💡 **Real-World Example:** A new lead submits their details on your website. At that exact moment, the system automatically enrolls them in a "New Lead Welcome Sequence." Day 0: They get a warm welcome email. Day 3: They get an email showcasing your top properties. Day 7: They get a "Limited Units Available" urgency email. Day 14: They get a testimonial email from a happy client. All of this happens without any human involvement.

How a Sequence Works — Step by Step

1. **You create the sequence and its steps**
   Give it a name ("New Lead Welcome"), set a trigger, and add as many email steps (drips) as you want, each with a delay in days.

2. **Someone gets enrolled**
   Either you add them manually, or the system adds them automatically based on the trigger (e.g. a new client is registered).

3 **The engine runs hourly**

Every single hour, the system checks: "Are there any emails due to be sent today?" If yes, it sends them automatically.

4 **The sequence completes or exits**

When all steps are done, the contact is marked "Completed." If they become a client mid-sequence, they are automatically "Exited" (so they don't get embarrassing lead-nurturing emails after buying!).

Automation Triggers — How People Enter a Sequence

✋

Manual Enrollment Only

You decide who goes in. You manually add people from the Contacts tab. Good for focused campaigns.

🤖

New Client Registered

The moment a new client is added to the Finance system, they are *automatically* enrolled. No manual work needed ever.

Smart Branching — The "Intelligent" Part

When creating a sequence with multiple steps, you can make any step (Step 2 and beyond) **"Smart"** by checking the *"Only if Opened Pre-Step"* checkbox. This means:

- If the person **opened** your previous email → they receive the next step as normal.
- If they **ignored** your previous email → the system skips this step rather than spamming them.

This makes your automation behave like a human would — not pestering people who aren't engaging, and rewarding those who are with more content.

Reading the Analytics on a Sequence Card

Each sequence card on the dashboard shows three numbers:

- **Active** — People currently working through the sequence right now.
- **Finished** — People who completed every step. Congratulations to them!
- **Exited** — People who were automatically removed (e.g. they became a client).

> 📌 **Pro Tip:** A high "Exited" count on a lead nurturing sequence is actually a **great sign!** It means lots of leads are converting to clients and being automatically removed from the sequence. That's the system working perfectly.

CHAPTER 7

The Marketing Calendar

The **Calendar tab** is your strategic planning board. It shows you all upcoming dates that matter for your marketing — Nigerian public holidays, invoice due dates, and your own custom business events — all in one place so you never miss a sending opportunity.

What Populates Automatically

Nigerian Public Holidays

Pre-loaded for the entire year. Eid-el-Fitr, Christmas, Independence Day, etc. — these are all excellent windows for sending themed property offers.

Invoice Due Date Alerts

If any of your clients have upcoming payment due dates, the system automatically places them on the calendar so you can send a timely, personal reminder.

Adding Your Own Business Events

Click **"Add Business Event"** and fill in:

- **Event Name** — E.g. "Phase 3 Launch", "Open Day — Epe Road", "Referral Drive"
- **Date** — When does this happen?
- **Recurrence** — Should this repeat weekly, monthly, or yearly? Or is it a one-off?
- **Recommended Action** — Write a note for yourself like "Send 'Save the Date' email 2 weeks before and a final reminder 3 days before."

The Priority System — Urgency Labels

Each event on the calendar gets an automatic urgency label based on how soon it is:

- 🔴 **URGENT** — Within the next 7 days. Act immediately!
- 🟡 **FOCUS** — Within 30 days. Start planning your campaign now.
- 🔵 **PLANNED** — More than 30 days away. Enough time to design a great campaign.

> 🏆 **The "Holiday Marketing" Playbook:** Two weeks before a major holiday (e.g. Eid, Christmas), send a themed property offer email to your "Hot Leads" segment. Subject line: "Celebrate Eid in your NEW home 🌙". One week before, send a follow-up to those who opened but didn't click. This two-touch approach consistently drives inquiries during festive periods.

CHAPTER 8

Compliance & The Unsubscribe System

This chapter is critical. Sending emails to people who don't want them is not just annoying — it is **illegal** under international anti-spam laws (GDPR, CAN-SPAM) and can get your entire email domain blacklisted, meaning your emails stop working for everyone. Our system is built to protect you and your brand.

How the Unsubscribe System Works

1. **The Link is Automatic**
   Every single email sent from this system contains an unsubscribe link at the footer. It is generated and injected automatically — you do not need to add it yourself.

2. **Branded Landing Page**
   When someone clicks "Unsubscribe", they are taken to a professional Eximp & Cloves branded page — not a generic plain page — where they can confirm their unsubscription.

3. **Instant & Permanent**
   The moment they confirm, their `is_subscribed` status is set to `false` in the database. No more emails will ever be sent to them, even if you accidentally try to include them.

4. **The Hard Block**
   The email sending engine checks every recipient before dispatching. If a contact has `is_subscribed = false`, the email is silently blocked — it will never leave the system.

What You'll See on a Contact's Record

In the Contacts tab, each person has a small colored circle indicating their subscription status:

- 🟢 **Green dot** — Active Subscriber (can receive emails)
- 🔴 **Red dot** — Unsubscribed (will NOT receive any emails — ever)

> ⚠️ **Important Rule:** You must never manually override an unsubscribe. If someone has chosen to opt out, that decision must be respected. Attempting to re-subscribe them or add them to a new list without their explicit consent is a legal violation.

🏆

CHAPTER 9

Pro Tips & Winning Playbooks

The "New Lead Nurture" Playbook (Set this up once)

Create a Sequence named **"New Lead Fast Track"** with trigger: *Manual Enrollment*. Every time you collect a new lead from any source (event, referral, ad), manually enroll them here.

- **Day 0:** Welcome email — "Thank you for your interest in Eximp & Cloves!"
- **Day 3:** Estate showcase — your best property with a Property Card block.
- **Day 7:** Social proof email — "3 families found their forever home last month."
- **Day 14:** Urgency email — "Only X units remaining in Phase 2."
- **Day 21:** Final touch — "We'd love to give you a personal tour."

The "Client Payment Reminder" Playbook

Create a campaign targeting the **"Outstanding Balance"** smart segment. Use the Account Summary block and personalization tags. The email should feel like a personal message, not a bulk blast. Sample subject line: *"Hi {{first_name}}, a quick note about your account"*.

The "Post-Purchase Delight" Playbook

Create a Sequence with trigger: *New Client Registered*. When someone buys, they automatically receive:

- **Day 0:** Congratulations + Welcome to the Eximp Family email.
- **Day 7:** "What happens next" — construction update, key date.
- **Day 30:** Referral ask — "Know someone who would love a home like yours?"

Essential Do's and Don'ts

✅ DO This	❌ DON'T Do This
Use personalization tags in every email	Send generic "Dear Customer" emails
Use Segments to target specific groups	Blast the same email to all 1,000 contacts every time
Schedule emails for Tuesday–Thursday mornings	Send on Monday morning or Friday afternoon
Check your campaign reports to learn & improve	Send and forget — data is your most valuable asset
Use sequences for onboarding and nurturing	Manually follow up each lead one by one forever
Duplicate high-performing campaigns	Start every email from scratch

🎯 **Your Goal for Week 1:** Set up one sequence (the "New Lead Fast Track"), sync all your clients from Finance, and send your first campaign to the "Hot Leads" segment. If you do just these three things, you'll already be doing marketing better than 90% of real estate companies in Nigeria.
